# Job Description

## Software Development Technician

12 Month Graduate Internship

### The Company

PIN IoT is an award-winning technology start-up based in Liverpool. Established in 2018 by an experienced team, PIN has developed a unique solution that leverages cutting edge wireless and sensor technology to deliver a digital transformation of the Waste industry.

The waste container is central to the industry's ability to operate. Without it, waste doesn't get collected, processed or recycled. Yet fleets of these essential assets are under poor control. Waste operators lack visibility of how many containers they have, where exactly they are, how they move, how long they have been on site with customers or how many are required to service demand. The unfortunate result is large scale cost inefficiency that also impacts revenue and the ability to serve customers.

The PIN solution transitions the industry to a digital view of operations, transforming overall performance and control.

The company is a first mover in a market set for huge growth and has secured substantial investor funding along with a number of long term customer contracts.

### The Role

To help fuel the next phase of growth the company is seeking to recruit a Software Development Technician, initially on a 12 month internship contract. Successful candidates will gain a breadth of experience and be given early responsibility in a dynamic, fast paced technology business set to transform the performance of the waste industry. Full training will be provided along with the opportunity to impress and secure a longer-term career within the Company.

Specific responsibilities are as follows:

- Work with the PIN team and external developers to scope, develop, test and deploy new features and version migrations for the PIN software platform via the established agile process
- Configure the software for new customers
- Support the take-on of new customer projects
- Participate in business improvement projects to improve internal productivity and process
- Provide day do day technical support to the PIN team

**The Person**

We are seeking to engage with recent graduates from technical/computer science related disciplines who can demonstrate:

- o   Intellect
- o   Hands on practical skills
- o   Good communication skills, both written and verbal
- o   The ability to thrive in a dynamic, fast-paced environment
- o   Comfortable working both independently and as part of a team
- o   Strong work ethic and drive to be successful
- o   Passion for delivering outstanding customer service
- o   Ability to engage with technology and become an expert in the use of our software

Whilst experience of front end software development, specifically working with Microsoft-based development tools and the Azure cloud environment would be helpful, this is not a pre-requisite.

The role will officially be based from our Liverpool office, with some home working required and travel to customer locations across the UK. Candidates will therefore need a full, clean driving license.
